

Eclipsys PeakPractice

Powerful integration for practice performance

Industry Challenges

- Balancing patient care with the business side of the practice
- Low reimbursements
- Regulatory and reporting pressures
- Workflow efficiency
- Patient safety and quality of care

Key Benefits

- Improves care quality
- Enhances efficiency
- Increases productivity
- Boosts productivity

Key Capabilities

- Seamless workflow
- Intelligent order placement
- Integrated referral management
- Centralized patient data
- Time tracking
- Security permissions
- Single sign-on
- Scanned document support
- Custom form builder
- Correspondence module
- Common print functionality
- Automated code checking
- Comprehensive reporting
- Billing correspondence
- Fast access to clinical data

Eclipsys PeakPractice™ provides an integrated electronic medical records and practice management solution (EMR/PM) that enables physicians to advance their practices toward optimal performance. With EMR/PM, practices gain full control over both sides of their business, focusing on the financial health and operational excellence of the organization as well as the highest-quality patient care.

Because the solution is integrated, a practice's clinical and financial management can be managed holistically, enabling improvement of key areas that impact each other and allowing for powerful analysis. By better allocating resources and improving staff efficiency using workflow-based dashboards and paperless recordkeeping, practices boost patient satisfaction.

PeakPractice is a .NET-based solution suite that is robust, scalable, and flexible to support the complex workflows of busy patient care environments, whether you run a single or multi-specialty practice, with multiple locations or a single clinic.

When users log in to PeakPractice, they automatically see the Practice Overview, a summary of all practice activities tailored to the user profile. Different views can be created for front and back office workers and for physicians.

Improves Practice Productivity

Seamless Workflow

The single application allows smooth check-in and check-out processes, streamlined scheduling, and workflow routing to deliver information to the correct user or role.

Intelligent Order Placement

The system automatically sends orders to the lab, pharmacy, or staff based on the protocol path selected by the clinician during a patient assessment, saving clinicians from inputting repetitive, time-consuming orders.

Integrated Referral Management

Providers can initiate referrals to specialists or other providers easily directly from the EMR, with patient data automatically filled in.

Centralized Patient Data

A single, shared record eliminates re-keying, reduces errors, and ends conflicting or duplicate information.

Time Tracking

Practices automatically record the time a patient spends at the office, from registration to checkout, for reporting, service quality improvement efforts, and financial analysis.

Optimizes Administrative Processes

Security Permissions

The system controls which users or roles have access to specific information, protecting privacy and securing process execution and sign-off.

Single Sign-On

A single login for all information across the practice saves considerable time and headaches associated with remembering different passwords. A single system also minimizes user training.

Scanned Document Support

Using barcode technology, the system allows the scanning and importation of paper documents directly into patient charts, providing access to complete records.

Custom Form Builder

Users can create easy PDF forms for collecting clinical and financial information, such as for worker's compensation or insurance disputes.

Correspondence Module

The office can send letters to patients, employers, insurance companies, or other providers, with automatic mail-merging of demographic, clinical, and financial data about the patient.

Common Print Functionality

The system's printing feature combines financial and clinical information in one integrated view for easy printing and review.

Integrates Real-Time Billing

Automated Code Checking

The system captures calculated E&M codes and automatically generated ICD-9 and CPT codes relevant to the patient visit and audits them for accuracy. Incorrect or unacceptable codes can then be edited prior to claims submission.

Comprehensive Reporting

Users can quickly generate a single report comprised of clinical, demographic, and financial information.

Billing Correspondence

Messages regarding clinical and financial issues can be consolidated into one location and sent in the same letter if desired.

Fast Access to Clinical Data

Users can quickly access clinical information while entering charges or working on rejected claims, checking accuracy and answer questions without logging in to a different system.

About Eclipsys

Eclipsys is a leading provider of advanced integrated clinical, revenue cycle, and performance management software, clinical content and professional services that help healthcare organizations improve clinical, financial, operational and client satisfaction outcomes.

Improved Outcomes: Measurable, Repeatable

Eclipsys delivers more than just software. We work closely with our clients, incorporating a Speed to Value approach refined through hundreds of successful implementations. These proven methods begin with early identification of improvement opportunities and continue through end-user adoption, dissemination of best practices, ongoing measurement of success and goal refinement. Healthcare providers of diverse sizes, specialties and geographies invest in Eclipsys solutions based on our clients' consistent success improving their outcomes in care, cost and satisfaction.
